### 30 DAY – DEHUMIDIFIER ACKNOWLEDGMENT

Elite Homes highly recommends that all our customers install a dehumidifier in the basement of their home due to the energy efficiency features provided in your home and high humidity weather within our region.

We also highly recommend leaving all the HVAC vents open to ensure proper ventilation. Many materials within your home require a minimum of 65 degrees or warmer temperature and it is recommended that the humidity be controlled with 45-55%

Protecting your home, and its material used to build it is, solely your responsibility. Elite Homes cannot be held responsible for the climate control of your home.

#### REVIEWED:

Is there a working dehumidifier installed and operational in the basement at time of 30-day Review?

YES \_\_\_\_\_ NO \_\_\_\_\_
